

## **Our History**

Health Facilities Group was established in 1994, and our architects are NCARB certified, licensed in multiple states, and understand healthcare regulations and guidelines. HFG's architects are skilled in facility master planning, site planning, medical programming and healthcare design. We focus exclusively on healthcare including hospitals, medical and dental offices, and congregate housing. Our team of architects and interior designers are experienced at medical equipment planning and design. Our certified interior designers work closely with clients to customize spaces that are functional and efficient for the staff, stay current on building products, materials, codes, and regulations while creating aesthetically pleasing interiors. The firm is fully equipped with the most current computer aided design and drafting systems for both construction documents and 3-D modeling. Throughout the Midwest, HFG works with more than 50 hospitals, numerous elder care facilities, and other specialty segments within the healthcare industry.

Today, as when our company began, our design commitment remains the same: Provide superior service to our clients, and create an environment that combines aesthetics, functionality, durability, economics, and maintainability. For clients, the reward of this philosophy is a facility that is not only attractive and operationally efficient, but one that will project an image of quality healthcare to your community for many years to come.
